VEHICLE TESTED

Polestar 2

2023 · Battery electric (BEV)

OW23 KUP

Vehicle Record

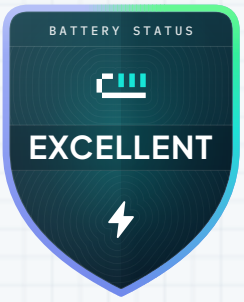

ODOMETER READING	86,923 miles
VIN (LAST 4 DIGITS)	2311
ORIGINAL BATTERY (TOTAL)	78.0 kWh
ORIGINAL BATTERY (USABLE)	75.0 kWh
VEHICLE TYPE	BEV

Test Record

REPORT ID	OW2AY6PVMR
EXECUTED BY	Car360
TEST COMPLETED	16.10.2026 · 09:15
ISSUED ON	16.10.2026

Laboratory Tested Range

PERFORMANCE

TEST	TESTED RANGE
WLTP combined cycle	293 miles

Lab based figures are rarely achieved in the real world but can be used to fairly compare vehicles across the market.

Real Range Estimates (MILES)

PERFORMANCE · SEE NOTE 2

Low

WINTER

173–187

URBAN	0%
MOTORWAY	100%

Typical

AUTUMN · SPRING

216–234

URBAN	70%
MOTORWAY	30%

High

SUMMER

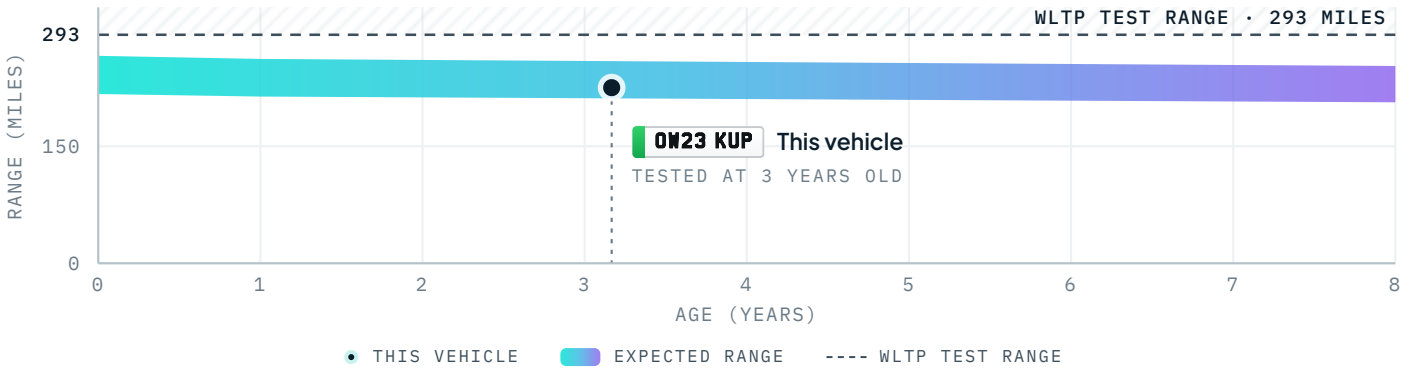

238–258

URBAN	100%
MOTORWAY	0%

Range estimates for three sets of driving conditions reflecting real world performance. These values may differ from official manufacturer data.

Predicted Range Performance (MILES)

SEE NOTE 3

WLTP tests are carried out in ideal lab conditions and do not reflect real-world performance.

Battery Capacity Warranty

WITHIN THRESHOLD

ORIGINAL TERM	8 years or 100,000 miles
COVER ENDS	When either limit is reached
STATUS	Not expired

MILEAGE REMAINING	13,077 miles
TIME REMAINING	4 years 10 months

Other criteria may apply. Covers excessive loss of battery capacity. Cover for battery faults or failure is separate and may have different limits. See note 4.

Charging Compatibility & Port Location

CHARGING	CONNECTOR	UK PUBLIC CHARGERS
AC SLOW AND FAST	Type 2	90,172
DC RAPID	CCS	24,150

MAXIMUM DC CHARGING RATE
149 kW

PORT LOCATION
Rear Left Side

DC charging relates to rapid charging at locations such as motorway services and petrol stations. To view all public chargers in the UK, head to zapmap.com.

Charging Figures (10-80% CHARGE)

TYPE	TYPICAL LOCATION	TIME TO CHARGE	AVERAGE COST
Slow	Home 7.4 kW · night	7 h 48 min	£5
Slow	Home 7.4 kW · day	7 h 48 min	£14
Fast	Supermarket	5 h 15 min	£31
Fastest	Motorway	30 min	£45

Average time and cost to charge from 10% to 80% at the time of print. Maximum DC charging rate **149 kW**.
Charging above 80% is best kept for longer trips to preserve battery condition. Night tariffs give the biggest savings at home.

Further Vehicle Data

6 CHECKS

CHECK	RESULT	DETAIL
Air Quality	CAZ ULEZ	This vehicle can enter Ultra Low Emission Zones (ULEZ) and Clean Air Zones (CAZ) free-of-charge.
London Congestion Charge	£15/DAY	This EV will need to pay the £15 daily Congestion Charge when travelling into London during certain hours.
Vehicle Classification	ULEV/ZEV	This vehicle is classed as an Ultra Low Emissions Vehicle (ULEV) and a Zero Emission Vehicle (ZEV).
Road Tax / VED	£200/YR	This vehicle will incur road tax of £200 annually.
Original Vehicle Warranty 3 YEARS OR 60,000 MILES	● WARRANTY EXPIRED	The original **vehicle** warranty is 3 years or 60,000 miles. This warranty has now expired due to the age of the vehicle.
OTA Software Updates	● SUPPORTED	This vehicle is still eligible to receive over-the-air (OTA) software updates.

Notes & Methodology

1 ClearWatt Battery Scorecard

A battery is complex, and a single percentage rarely tells the whole story. Two cars showing the same number can be in quite different health. The Scorecard weighs readings taken directly from the vehicle, such as cell voltages and charging history, with wider checks like software version and recall status, to build one consistent assessment.

2 Real Range Insights

Range for three driving scenarios: the most common, the lowest and the highest you can expect from this vehicle. These are **estimates** and subject to variability. Driving mode, climate control and driving style all affect the range achieved on a full charge. The lab-based WLTP combined range is **293 miles**.

3 Predicted Range Performance

ClearWatt aggregates data from multiple sources, including our data lake of test results, to plot predicted range performance. These figures are estimates and depend on the future use and treatment of the vehicle. Frequent rapid charging accelerates battery degradation and should be avoided where possible.

4 Battery & Vehicle Warranties

Battery capacity cover applies to loss below the manufacturer's stated threshold and is separate from cover for battery faults or failure. Vehicle warranties typically cover the motor, drivetrain, electronics and control systems. Status is shown against the original stated terms. The manufacturer may require more information to validate a claim.

This certificate is an assessment based on data obtained from the vehicle's on-board systems and other industry sources. It is not issued, endorsed, or verified by the vehicle manufacturer. The results represent the battery's condition at the time of testing and do not guarantee future performance, reliability, or lifespan. Any modifications or subsequent changes to the vehicle or its systems may render this certificate invalid.
